

ON THE MODELLING OF TECHNICAL PRODUCTS DESIGN PROCESS

D. DIACONESCU¹ C. JALIU¹ R. SĂULESCU¹

***Abstract:** The main models that are proposed in the technical literature for establishing an algorithm for a technical product life cycle and design process are presented succinctly in this paper. There are then developed, new and integrated variants, in a simplified graphical form, based on the previously presented models.*

***Key words:** product design, conceptual (functional) design, embodiment design, detailing design.*
