

# RANDOM VARIABLES GENERATION FOR THE BROWNIAN CURVES PLOT

Nicolae EFTIMIE<sup>1</sup>

**Abstract:** *The morphological theories rediscover time (or rather the changing reality). These conceive the evolution as a sequence of heterogeneous states qualitatively different among them. Time does not mean any more the indefinite repetition of the same thing, but it becomes synonym with creation. Each system contains its own history; time is no more a neutral and universal medium but it becomes an essential property of reality. Life systems, their appearance and disappearance are led by time.*

**Key words:** *Brownian motion, distribution.*
