

THE ROLE OF EDUCATION IN SPECIFIC PROPHYLAXIS OF B HEPATITIS VIRUS TRANSMISSION

M.E. COCUZ¹ R.S. MICLĂUŞ¹

Abstract: BHV prevention in large population involved specially immunisation. World Health Organisation recommended in 1992 BHV vaccination in National Programs and Vaccination Strategies, included Romania. Despite these programs, the majority of population is not included in vaccination programs and the medical education level is very low. The study evaluates the present knowledge about BHV infection, the level of awareness regarding the necessity of specific prophylaxis and the opportunity and the student's disponibility of continuing the education in this important public health matter.

Key words: BHV prevention, immunisation, education.
