

HEPATOCAARCINOMA WITH INVASION OF RIGHT SUPRA-HEPATIC VEIN – CASE STUDY –

Ileana MUNTEAN*, **Rosana MANEA ***

***Abstract:** The present article presents the case of a patient with hepatic cirrhosis who, on imagistic basis (echography and computerized tomography examination) was diagnosed with invasive hepatocarcinoma in the right supra-hepatic vein. The particularity of this case consists in the fact that the tumour extension, invasion, occurs in a supra-hepatic vein and not in one of the branches of the portal vein as it is more frequently met in practice.*

***Key words:** hepatocarcinom, super-hepatic vein, intraluminal tromb*
