AN ORIGINAL DATA PROCESSING METHOD FOR CROSS DOMAIN SOFTWARE APPLICATIONS

E. OANŢĂ [*] I. ODĂGESCU [**] I. TAMAŞ [***]

Abstract: *In the paper is presented a set of original software applications which use an original method for the processing of the matrices. Being a general concept, it can be used in several programming languages, in different operating systems and in many domains of science.*

Key words: *data structure, dynamic data allocation, high versatility.*
