

# LONG-TERM EVALUATION OF THE EFFECTS OF *SURFACE IMPREGNATION* OF WOOD WITH REACTIVE RESINS PART 2 - FIR WOOD

E. BELDEAN<sup>1</sup>

M.C. TIMAR<sup>1</sup>

**Abstract:** *The paper presents the results of a long-term evaluation of the efficiency of surface impregnation of fir wood with reactive resins on its behaviour in outdoors above ground conditions. This evaluation was done after 27 months in a modified L-joint test. The resin treatment was associated with bio-protection with a biocide primer and coating with alkyd white paint.*

**Key words:** *surface impregnation, reactive resins, outdoor exposure, wood degradation, discolouration, cracking.*
