

CALIBRATION LIFE OF THE MEASURING DEVICES - A FUNCTION OF THE METROLOGICAL RELIABILITY

Ramona CLINCIU¹

Abstract: *The paper presents an algorithm which can be used for the determination of the calibration life of the measuring devices as a function of the metrological reliability. The algorithm simulates the parameter deviation for the case of a normal distribution function. The case of the water meters is considered.*

Key words: *parameter deviation, metrological reliability, calibration life, water meters.*
