

ZigBee WIRELESS DEVICES SHARING OVER IP NETWORK

R. DEMETER¹ I. SÁRKÁNY¹

Abstract: *The paper presents the ZigBee network, where a ZigBee coordinator can be connected to a host system (computer or router), which will facilitate access to the entire network of sensors. More ZigBee networks can be managed remotely, over LAN or WAN networks, thus creating a distributed system of wireless sensors.*

Key words: *computer network, ZigBee, wireless sensor network, remote engineering.*
